Dear Hiring team,

I am a knowledgeable, motivated, and versatile designer. I have 13+ years of experience building websites and applications for industry-leading mobile and web clients. I believe I have the skills to make an impact at Docker. I am the lead UX Designer on the ArmorLock Platform at Western Digital. ArmorLock is an encrypted drive for the Movie and Entertainment industry, allowing for the safe and secure transport of files for film and TV.

While working at Western Digital I have been responsible for the UX of the ArmorLock platform on Android, iOS, and macOS. I inherited this project just after it had gone live. Through user testing and interviews with our professional partners I was able to identify pain points and start working with the team to create solutions. I also worked with the team to overhaul the design system to incorporate Figma's new features, which allowed designers and developers to quickly prototype and test new designs.

My time with ArmorLock, and other products I've designed, has afforded me the opportunity to learn and grow as a UX Designer. I'm confident that my abilities, along with my can-do, teamwork-oriented attitude, can make a positive contribution to your team.

Sincerely,

Adric Gudbranson
